

Tables in ‘Nonverbal Communication of Partisan Conflict’

Mathias Rask & Frederik Hjorth

2025-06-19

This file produces all tables generated in the replication script `replication.R` for the manuscript ‘Nonverbal Communication of Partisan Conflict’.

Appendix D

Table D1: Distribution of labels for the binary (exercise 1) and continuous (exercise 2) coding and intercoder reliability metrics. For the distribution of the continuous coding, a speech is classified as activated if arousal is labeled as 5 (the midpoint of the 0–10 scale) or larger. The category ‘Neither’ means that the two agree that the speech is nonactivated, ‘One coder’ means that one of the two coders have labeled a speech as activated, and ‘Both coders’ means that the two coders agree that a speech is activated. Note that the binary coding sums to 99 and not 100 because one of the sampled speeches lacked aligned audio. The agreement percentage is computed using the binary representation of the continuous coding also with 5 as the cutoff.

	Coding	
	Binary (Exercise 1)	Continuous (Exercise 2)
<i>Coder agreement</i>		
Neither	71	50
One coder	13	13
Both coders	15	37
<i>Intercoder reliability</i>		
Agreement pct.	0.87	0.87
Krippendorff’s α	0.62	0.85
Cohen’s κ	0.62	–
ICC	–	0.93

Table D2: Original and translated texts of largest positive and negative residuals.

Residual	Original text	Translated text
Positive	<p>“Hvis jeg forstår hr. Steen Gade korrekt, går spørgsmålet også på, hvorvidt det med en resolution kan sikres, at der i al fremtid vil kunne opnås enighed om, hvordan FN skal agere. Der må jeg blot konstatere, at hvad angår Kosovo, nåede man jo ikke frem til nogen løsning i FN’s Sikkerhedsråd. Der valgte man jo uden et FNmandat og med kraftige advarsler fra Kofi Annan som generalsekretær at foretage en aktion. Det kan også blive nødvendigt fremover. Det er da selvfølgelig, fuldstændig som udenrigsministeren allerede har gjort rede for i dag, vigtigt, at man har en drøftelse i FN’s Sikkerhedsråd om de principper og de ting, der ligger til grund, hvis man vil anvende magt. Det er vi da helt enige om. Men derfor er der da stadig væk en forskel på at have en drøftelse om det i Sikkerhedsrådet og så skulle lave en resolution, som vi ved ikke har nogen gang på jorden.”</p>	<p>“If I understand Mr Steen Gade correctly, the question is also about whether a resolution can ensure that agreement can be reached on how the UN should act in the future. All I have to say is that, as far as Kosovo is concerned, no solution was reached in the UN Security Council. Without a UN mandate and with strong warnings from Kofi Annan as Secretary-General, it was decided to take action. It may also be necessary in the future. As the Foreign Minister has already explained today, it is of course important to have a discussion in the UN Security Council about the principles and the things that form the basis for the use of force. We are in complete agreement on that. However, there is still a difference between having a discussion about it in the Security Council and then having to draft a resolution, which we know has no effect on the ground.”</p>
Negative	<p>“Jeg kunne aldrig drømme om at møde op i EU og så blive gjort til grin. Og derfor vil jeg sige, at hr. Morten Østergaards forslag jo er fuldstændig vanvittigt. Jeg kunne da ikke drømme om at møde op og komme med påstande om noget, som jeg på regeringens vegne mange, mange gange her i Folketinget har hørt er blevet fuldstændig afvist. Jeg synes, det europæiske samarbejde skal bruges til seriøse ting og til ting, hvor der er konkrete sager, man kan tage hånd om, og derfor må jeg sige, at den der slags ideer synes jeg ville være endnu en paradeforestilling, som ikke har noget som helst andet formål end at kaste sig ud i en masse påstande,²der slet ikke kan bevises.”</p>	<p>“I would never dream of showing up in the EU and then being made a fool of. And that is why I would say that Morten Østergaard’s proposal is completely insane. I would never dream of showing up and making claims about something that I, on behalf of the government, have heard completely rejected many, many times here in the Danish Parliament. I think that European cooperation should be used for serious things and for things where there are concrete issues that can be dealt with, and therefore I have to say that I think that this kind of idea would be another parade show that has no purpose whatsoever other than to throw itself into a lot of claims that cannot be proven at all.”</p>

Appendix F

Table F1: Summary table for a selected set of variables in the dataset.

	Unique (#)	Missing (%)	Mean	SD	Min	Median	Max
Outbloc	2	0	0.59	0.49	0.00	1.00	1.00
Out-vote	3	79	0.36	0.48	0.00	0.00	1.00
